

Once a physician is enabled on CII, follow these steps to send consults to Netcare*.

Physicians – To send a Consult Letter to Netcare

1. Open the patient’s chart and start a letter as normal (‘Data’ > ‘New Letter’ or Ctrl {Command} + L).
2. The **Addressees** window opens. **Erase any pre-populated information** in the ‘To:’ field. Then, **manually select** the letter addressee using one of the following methods:
 - a. Add a recipient that is stored in the Address Book by clicking the  icon.
 - b. Add a recipient that is not stored in the Address Book by clicking ‘One-Time Address’.
3. Select the ‘**Eligible for Encounter Data Extract**’ check box.¹
4. Finish your letter as normal and select any attachments that are to go along with the letter.
Note: if you use a transcription service and receive the letters back as PDF, to send the report to Alberta Netcare you must still create a letter in PS Suite and attach the transcription to that letter.
5. Mark the letter as finished (if it is not already), and then close the patient’s record. The letter is sent to Alberta Netcare as a PDF document that evening.
Note: users with setting ‘Mark notes as unfinished-Never’ (yellow bar does not appear) selected may require a workflow adjustment. See the [Creating User Accounts](#) PS Suite help file for more information on this setting.

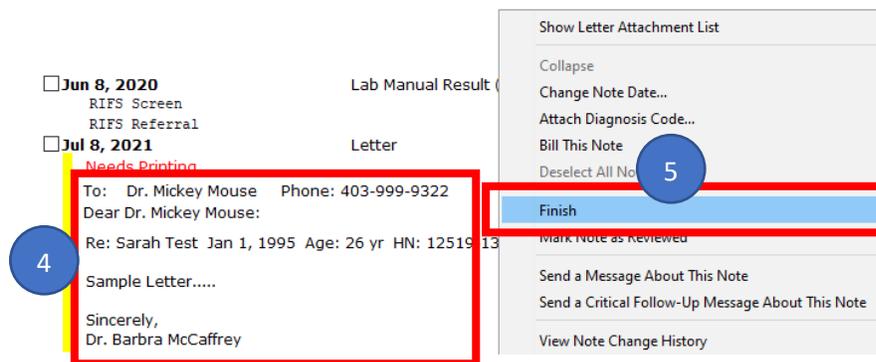

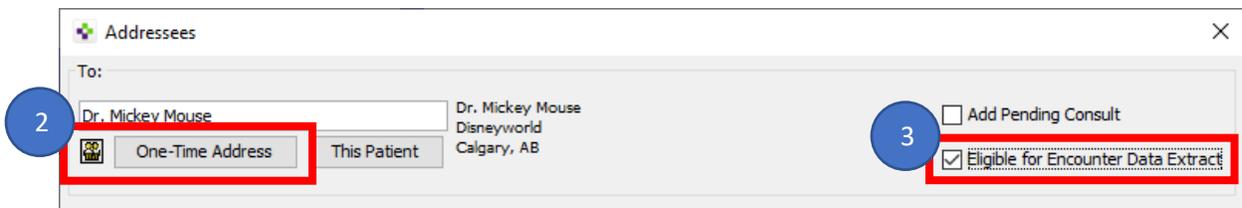

¹Although the checkbox uses the terminology ‘Encounter Data Extract’, it will only make the consult letter and any attachments flow to Alberta Netcare. No other encounter information will be sent.

Clinic Team Members working on behalf of a physician/provider – To send a Consult Letter to Netcare

Note: Ensure the preference ‘Letters will be Eligible for Encounter Data Extract’ is selected for your user (see [Enabling EMR integration CII](#)). If the preference is not selected, the letter will not be sent to Alberta Netcare).

1. Open the patient’s chart and start a letter as normal (‘Data’ > ‘New Letter’ or Ctrl {Command} + L). Ensure you are using the letterhead for the appropriate participating physician/provider. If you create the letter in your name, the letter will not be sent to Alberta Netcare.
2. The **Addressees** window opens. **Erase any pre-populated information** in the ‘To:’ field. Then, **manually select** the letter addressee using one of the following methods:
 - a) Add a recipient that is stored in the Address Book by clicking the  icon.
 - b) Add a recipient that is not stored in the Address Book by clicking ‘One-Time Address’.
3. Select the ‘**Eligible for Encounter Data Extract**’ check box².
4. Finish your letter as normal and select any attachments that are to go along with the letter.
Note: if you use a transcription service and receive the letters back as PDF, to send the report to Alberta Netcare you must still create a letter in PS Suite and attach the transcription to that letter.
5. Mark the letter as finished (if it is not already), and then close the patient’s record. The letter is sent to Alberta Netcare as a PDF document that evening.
Note: users with setting ‘Mark notes as unfinished-Never’ (yellow bar does not appear) selected may require a workflow adjustment. See the [Creating User Accounts](#) PS Suite help file for more information on this setting.

² Although the checkbox uses the terminology ‘Encounter Data Extract’, it will only make the consult letter and any attachments flow to Alberta Netcare. No other encounter information will be sent.
